 * Default theme implementation for displaying search results.
 *
8 * This template collects each invocation of theme_search_result(). ...
  * This and
  * the child template are dependant to one another sharing the markup ...
  * for
  * definition lists.
  *
  * Note that modules may implement their own search type and theme ...
  * function
13 * completely bypassing this template.
  *
  * Available variables:
  * - $search_results: All results as it is rendered through
  *   search-result.tpl.php
18 * - $type: The type of search, e.g., "node" or "user".
  *
  *
  * @see template_preprocess_search_results()
  */
23 ?>
<dl class="search-results <?php print $type; ?>-results">
  <?php print $search_results; ?>
</dl>
<?php print $pager; ?>

```

10.3. Fichero search-result.tpl.php

```

<?php
// $Id: search-result.tpl.php,v 1.1.2.1 2008/08/28 08:21:44 dries Exp ...
$

```

```

3  /**
   * @file search-result.tpl.php
   * Default theme implementation for displaying a single search result.
   *
8  * This template renders a single search result and is collected into
   * search-results.tpl.php. This and the parent template are
   * dependent to one another sharing the markup for definition lists.
   *
   * Available variables:
13  * - $url: URL of the result.
   * - $title: Title of the result.
   * - $snippet: A small preview of the result. Does not apply to user ...
   *   searches.
   * - $info: String of all the meta information ready for print. Does ...
   *   not apply
   *   to user searches.
18  * - $info_split: Contains same data as $info, split into a keyed ...
   *   array.
   * - $type: The type of search, e.g., "node" or "user".
   *
   * Default keys within $info_split:
   * - $info_split['type']: Node type.
23  * - $info_split['user']: Author of the node linked to users profile. ...
   *   Depends
   *   on permission.
   * - $info_split['date']: Last update of the node. Short formatted.
   * - $info_split['comment']: Number of comments output as "% comments...
   *   ", %
   *   being the count. Depends on comment.module.
28  * - $info_split['upload']: Number of attachments output as "% ...
   *   attachments", %
   *   being the count. Depends on upload.module.
   *
   * Since $info_split is keyed, a direct print of the item is possible.
   * This array does not apply to user searches so it is recommended to ...
   * check
33  * for their existence before printing. The default keys of 'type', '...
   *   user' and
   *   'date' always exist for node searches. Modules may provide other ...
   *   data.
   *
   *   <?php if (isset($info_split['comment'])) : ?>
   *       <span class="info-comment">
38  *           <?php print $info_split['comment']; ?>
   *       </span>
   *   <?php endif; ?>
   *
   * To check for all available data within $info_split, use the code ...
   * below.
43  *
   *   <?php print '<pre>'. check_plain(print_r($info_split, 1)) . '</pre...
   *   >'; ?>
   *

```

```

```

<?php
2 // $Id: page.tpl.php,v 1.11.2.1 2009/04/30 00:13:31 goba Exp $

/**
 * @file page.tpl.php
 *

```

```
7 * Theme implementation to display a single Drupal page.
*
* Available variables:
*
* General utility variables:
12 * - $base_path: The base URL path of the Drupal installation. At the ...
    very
    * least, this will always default to /.
    * - $css: An array of CSS files for the current page.
    * - $directory: The directory the theme is located in, e.g. themes/...
        garland or
        * themes/garland/minelli.
17 * - $is_front: TRUE if the current page is the front page. Used to ...
    toggle the mission statement.
    * - $logged_in: TRUE if the user is registered and signed in.
    * - $is_admin: TRUE if the user has permission to access ...
        administration pages.
*
* Page metadata:
22 * - $language: (object) The language the site is being displayed in.
    * $language->language contains its textual representation.
    * $language->dir contains the language direction. It will either be...
        'ltr' or 'rtl'.
    * - $head_title: A modified version of the page title, for use in the...
        TITLE tag.
    * - $head: Markup for the HEAD section (including meta tags, keyword ...
        tags, and
27 * so on).
    * - $styles: Style tags necessary to import all CSS files for the ...
        page.
    * - $scripts: Script tags necessary to load the JavaScript files and ...
        settings
        for the page.
    * - $body_classes: A set of CSS classes for the BODY tag. This ...
        contains flags
32 * indicating the current layout (multiple columns, single column), ...
    the current
    * path, whether the user is logged in, and so on.
*
* Site identity:
    * - $front_page: The URL of the front page. Use this instead of ...
        $base_path,
37 * when linking to the front page. This includes the language domain...
        or prefix.
    * - $logo: The path to the logo image, as defined in theme ...
        configuration.
    * - $site_name: The name of the site, empty when display has been ...
        disabled
        in theme settings.
    * - $site_slogan: The slogan of the site, empty when display has been...
        disabled
42 * in theme settings.
    * - $mission: The text of the site mission, empty when display has ...
        been disabled
```

```

*   in theme settings.
*
*   Navigation:
47 * - $search_box: HTML to display the search box, empty if search has ...
   been disabled.
* - $primary_links (array): An array containing primary navigation ...
   links for the
*   site, if they have been configured.
* - $secondary_links (array): An array containing secondary ...
   navigation links for
*   the site, if they have been configured.
52 *
*   Page content (in order of occurrence in the default page.tpl.php):
* - $left: The HTML for the left sidebar.
*
* - $breadcrumb: The breadcrumb trail for the current page.
57 * - $title: The page title, for use in the actual HTML content.
* - $help: Dynamic help text, mostly for admin pages.
* - $messages: HTML for status and error messages. Should be ...
   displayed prominently.
* - $tabs: Tabs linking to any sub-pages beneath the current page (e....
   g., the view
*   and edit tabs when displaying a node).
62 *
* - $content: The main content of the current Drupal page.
*
* - $right: The HTML for the right sidebar.
*
67 * Footer/closing data:
* - $feed_icons: A string of all feed icons for the current page.
* - $footer_message: The footer message as defined in the admin ...
   settings.
* - $footer : The footer region.
* - $closure: Final closing markup from any modules that have altered...
   the page.
72 *   This variable should always be output last, after all other ...
   dynamic content.
*
* @see template_preprocess ()
* @see template_preprocess_page ()

```

12.4. Fichero user-profile.tpl.php

```

<?php
// $Id: user-profile.tpl.php,v 1.2.2.2 2009/10/06 11:50:06 goba Exp $
3
/**
* @file user-profile.tpl.php
* Default theme implementation to present all user profile data.
*
8 * This template is used when viewing a registered member's profile ...
* page,
* e.g., example.com/user/123. 123 being the users ID.
*
* By default, all user profile data is printed out with the ...
* $user_profile
* variable. If there is a need to break it up you can use $profile ...
* instead.
13 * It is keyed to the name of each category or other data attached to ...
* the
* account. If it is a category it will contain all the profile items....
* By
* default $profile['summary'] is provided which contains data on the ...
* user's
* history. Other data can be included by modules. $profile['...
* user_picture'] is
* available by default showing the account picture.
18 *
* Also keep in mind that profile items and their categories can be ...
* defined by
* site administrators. They are also available within $profile. For ...
* example,
* if a site is configured with a category of "contact" with
* fields for of addresses, phone numbers and other related info, then...
* doing a
23 * straight print of $profile['contact'] will output everything in the
* category. This is useful for altering source order and adding ...
* custom

```

```
* markup for the group.  
*  
* To check for all available data within $profile, use the code below...  
*  
28 * @code  
*   print '<pre>'. check_plain(print_r($profile, 1)) .'/pre>';  
* @endcode  
*  
* Available variables:  
33 *   - $user_profile: All user profile data. Ready for print.  
*   - $profile: Keyed array of profile categories and their items or ...  
*     other data  
*     provided by modules.  
*  
* @see user-profile-category.tpl.php  
38 *   Where the html is handled for the group.  
* @see user-profile-item.tpl.php  
*   Where the html is handled for each item in the group.  
* @see template_preprocess_user_profile()  
*/

Carpeta drupal/sites/default

13.1. Fichero default.settings.php

```
<?php
// $Id: default.settings.php,v 1.8.2.4 2009/09/14 12:59:18 goba Exp $

4 /**
 * @file
 * Drupal site-specific configuration file.
 *
 * IMPORTANT NOTE:
9 * This file may have been set to read-only by the Drupal installation
 * program. If you make changes to this file, be sure to protect it ...
 * again
 * after making your modifications. Failure to remove write ...
 * permissions
 * to this file is a security risk.
 *
14 * The configuration file to be loaded is based upon the rules below.
 *
 * The configuration directory will be discovered by stripping the
 * website's hostname from left to right and pathname from right to
 * left. The first configuration file found will be used and any
19 * others will be ignored. If no other configuration file is found
 * then the default configuration file at 'sites/default' will be used...
 *
 * For example, for a fictitious site installed at
 * http://www.drupal.org/mysite/test/, the 'settings.php'
24 * is searched in the following directories:
 *
 * 1. sites/www.drupal.org.mysite.test
 * 2. sites/drupal.org.mysite.test
 * 3. sites/org.mysite.test
29 *
 * 4. sites/www.drupal.org.mysite
 * 5. sites/drupal.org.mysite
 * 6. sites/org.mysite
 *
34 * 7. sites/www.drupal.org
```

```

* 8. sites/drupal.org
* 9. sites/org
*
* 10. sites/default
39 *
* If you are installing on a non-standard port number, prefix the
* hostname with that number. For example,
* http://www.drupal.org:8080/mysite/test/ could be loaded from
* sites/8080.www.drupal.org.mysite.test/.
44 */

/**
 * Database settings:
 *
49 * Note that the $db_url variable gets parsed using PHP's built-in
 * URL parser (i.e. using the "parse_url()" function) so make sure
 * not to confuse the parser. If your username, password
 * or database name contain characters used to delineate
 * $db_url parts, you can escape them via URI hex encodings:
54 *
 *   : = %3a    / = %2f    @ = %40
 *   + = %2b    ( = %28    ) = %29
 *   ? = %3f    = = %3d    & = %26
 *
59 * To specify multiple connections to be used in your site (i.e. for
 * complex custom modules) you can also specify an associative array
 * of $db_url variables with the 'default' element used until ...
 * otherwise
 * requested.
 *
64 * You can optionally set prefixes for some or all database table ...
 * names
 * by using the $db_prefix setting. If a prefix is specified, the ...
 * table
 * name will be prepended with its value. Be sure to use valid ...
 * database
 * characters only, usually alphanumeric and underscore. If no ...
 * prefixes
 * are desired, leave it as an empty string ''.
69 *
 * To have all database names prefixed, set $db_prefix as a string:
 *
 *   $db_prefix = 'main_';
 *
74 * To provide prefixes for specific tables, set $db_prefix as an array...
 *
 * The array's keys are the table names and the values are the ...
 * prefixes.
 * The 'default' element holds the prefix for any tables not specified
 * elsewhere in the array. Example:
 *
79 *   $db_prefix = array(
 *     'default' => 'main_',
 *     'users'   => 'shared_',

```

```

84 *      'sessions' => 'shared_',
*      'role'      => 'shared_',
*      'authmap'   => 'shared_',
*    );
*
* Database URL format:
* $db_url = 'mysql://username:password@localhost/databasename';
89 * $db_url = 'mysqli://username:password@localhost/databasename';
* $db_url = 'pgsql://username:password@localhost/databasename';
*/
$db_url = 'mysql://username:password@localhost/databasename';
